PREFACE

25X1C

This Mission Coverage Index (MCI) furnishes a listing of intelligence targets covered by CHURCH DOOR Mission 106. The listing provides the latest description based on photographic interpretation for each target covered by the mission. Items in the listing are arranged by (1) WAC area, and (2) coordinates reading from south to north and from west to east. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix.

For the convenience of the user, a subject index to the intelligence targets has been included following the listing. Targets in the subject index are listed (1) by category, and (2) alphabetically by place name.

25X1C

The user of this MCI is cautioned that the scan of photography from Mission 106 was accomplished in a relatively short time and often without the aid of precise analytical and mensural equipment commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, future detailed analysis may somewhat alter portions of the information.

SUMMARY

25X1C

Mission [] 106, accomplished on 26 March 1962, covered many of the major cities of southeastern Communist China. The weather was unusually good and the almost complete lack of industrial smoke and haze permitted interpretation of at least 95 percent of the photography.

Installations of particular interest were the Shanghai, Nan-ching, Wu-han, Chang-sha and Canton complexes with their industries, air defenses and naval facilities. A new airfield for light bombers was discovered north of Canton at Lei-yang. In all 34 airfields and 794 military aircraft were observed on the mission photography.

25X1

[]
Another feature of interest was the numerous construction projects observed, including industrial, rail, highway and canal projects.

APPENDIX
EXPLANATION OF COLUMN HEADINGS
AND PHOTO REFERENCES

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. The city and installation names are followed by a capsule description, where appropriate.

Coordinates -- Coordinates are referenced to the southwest corner of the minute square. When the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Installation Numbers -- The Installation Numbers column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target numbered 0492-1 and an NPIC target numbered 0493-1. In each instance, the NPIC installation number is 1, but the installations appear on different WACs.

The photo reference indicates frame(s) on which the target appears, and conditions which affect interpretation of the target.
